

The great thing about CODERS is that, through a series of formulas, letters and symbols that can seem undecipherable to the untrained eye, they can help established software go the extra mile and feel just right, like a custom-made suit tailored just for you!

By constructing EasyBuild on top of Microsoft Dynamics 365 Business Central, CODERS have done just so by adding a Jobs & Resources module to the software. This will let you streamline management processes and better run projects, equipment, workforce, and financial operations and make more informed and swift decisions by accessing real-time data and information.

Role Centers in EasyBuild grant you direct access to the data, reports, and tasks you need. This way, you can enhance your operational efficiency and effectively manage projects by quickly accessing Projects details, bills of quantities (BOQs) as well as supply and resources planning.

## KEY BENEFITS

In addition to assisting you in building and maintaining operational excellence, **EasyBuild helps you:**

- Gain greater insight through powerful business intelligence capabilities that include a wide range of analytical and reporting tools;
- View key performance indicators (KPIs), such as comparing estimate with actual figures;
- Use ad-hoc reporting to gain a real-time view of projects execution;
- Share findings using Microsoft Office Excel;
- Improve response time for tendering activity using accurate data;
- Optimize financial management and industry specific functionalities to meet your requirements;
- Track subcontractors and manage sophisticated procurement;
- Allow better equipment, labors and inventory utilization.
